## (54) SELF-LIGHT EMITTING TYPE DISPLAY

### (57)Abstract:

**PROBLEM TO BE SOLVED:** To provide a self-light emitting type display in which the cost is reduced, the reflection of external light beams is also reduced and the luminance is made high and bright.

**SOLUTION:** The display has a light emitting layer which is provided with phosphor, a transmission reflection separating layer which is arranged on the observer's side of the light emitting layer, selectively transmits linearly polarized light beams in a specific direction and reflects all other light beams and a linear polarization plate which is arranged on the surface of the opposite side with respect to the light emitting layer of the transmission reflection separating layer. The light transmitting directions of the layer and the plate are made into a same direction.

## LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's
